

# Cavi-Lipo

I am pleased to offer to my clients an advanced way of removing the appearance of cellulite and break down fat cells.

Though it's been used for years all around the world Cavi-Lipo has just recently been given the OK from the FDA.

The Cavi-Lipo technology, recently featured on Dr. Oz, Fox News and CBS News, promises to revolutionize cosmetic procedures previously attained only by surgery. It is a safe, non-surgical, non-invasive treatment that removes fat and breaks down cellulite. Whether you want to remove fat from your belly, arms, thighs, back or even your chin, this is the breakthrough treatment you have been waiting for! There is no down time and results are usually immediate and permanent.

Cavi-Lipo works by using ultrasound to breakdown fat cells and liquefy them. They are then metabolized and released through the liver and lymphatic system. Through this process, smoother skin, reduced circumference and a more sculpted body can be seen almost immediately. Results can be compared to liposuction surgery, but without scarring, swelling, or side effects! Each treatment last approximately 75 minutes and is found to be relaxing.

In most cases the results can be seen immediately and depending on individual clients, most will need between 3 - 12 treatments with intervals of 72 hours. This interval allows the body time to metabolize the adipose cells (fat cells) for removal. Drinking the recommended amount of water, 1.5 liters a day, will greatly assist the body to cleanse itself.

This non-invasive Liposuction alternative is perfect for individuals who are looking to target areas that are fat resistant to diet and exercise. Finally there is a way to achieve the look that you want without the risk.

Now when we say fat removal we mean it! Cavi-Lipo actually destroys fat cells. This means that they don't come back. Clients are seeing results in 1 session.

**How Does Cavi-Lipo Work?**

Utilizing ultrasound waves Cavi-Lipo penetrates down through the skin into the fat cells creates a bubble in the adipose cell. This action releases the adipose cell (cavitation), along with fatty acids and toxins. Simultaneously, the light therapy and the stimulation of the ultrasound waves, tighten the skin surface. No other body-sculpting unit combines both skin tightening with measurable change after just one treatment.

### Unlike Smart Lipo or Laser Lipo

Cavi-Lipo is entirely pain-free and non-invasive and can be used to treat the entire body including the face! A Cavi-Lipo treatment can also help cleanse the body by stimulating the lymphatic system and promoting lymphatic drainage. This is the ideal treatment for healthy people with difficult fat pockets or areas that they just can't exercise away.

### Does Cavi-Lipo really work and Does it last?

Not only does it work but it works so incredibly well you will want to return for additional treatments in other areas of your body. This Cavi-Lipo is the real deal, not a cheap knock-off or some non FDA approved import.

## Frequently Asked Questions

### On what area of my body can I use the Cavi-Lipo?

Common areas are: stomach, thighs, hips, back, chin, and arms. There is no limit to where you can use the Cavi-lipo, but areas with larger amounts of localized fat are likely to see faster results.

### Is the Ultrasound Cavitation treatment painful?

No. This treatment is painless. In fact, it is very relaxing!

### Is the Cavi-lipo treatment safe?

Yes, because Cavi-Lipo is a non-surgical, non-invasive treatment, it is safe and you will experience no downtime as a result.

### How does ultrasound cavitation remove the fat from my body?

Ultrasound cavitation emulsifies your fat during the treatment making it easy for your body to expel it through the urinary and lymphatic systems.

### How long are the Cavi-lipo treatments and how many should I have

done?

My treatments last about 75 minutes because I incorporate lymphatic massage before and after use of the Cavi-Lipo machine. I recommend doing them no sooner than every 72 hours to allow ample time for the fat to expel completely from your body. While you are able to have up to 12 sessions, most clients will do anywhere between 6 -12 before achieving their desired results.

Do I need to do anything before or after the treatments?

In order to make your treatments more effective, you will want to be sure to drink plenty of water (at least 1.5 liters) before and after your treatment. We also recommend eating a low calorie diet and minimizing your intake of carbohydrates and fat for at least 24 hours before hand. This will help to burn any fatty acid and glucose stores in your body. After your treatment, you will want to walk, drink plenty of water and do light exercise to aid in the expulsion of the fat through your lymphatic system.

Can anyone have the treatment done?

For the most part, anyone looking to reduce fat and cellulite are a good candidate for the Cavi-lipo. However, anyone with a pacemaker, cardiac or vascular disease, and women who are pregnant should not have the Cavi-lipo treatment done. If you have a medical condition, your Cavi-lipo technician will advise you to consult your physician before your treatment.

Above photos are the before and after results after six 30 minute treatments she is well on her way to achieving the results just in time for spring.
